7. Administrator manual (accounts)
8. Passenger guide (tracking and flights)
9. Understanding baggage statuses
10. Anti-fraud rules
11. Frequently asked questions
12. Good practices

1. About this manual

This manual supports the use of Police Bagage, the boarding-control and baggage anti-fraud platform of ATS Handling. It is intended for trained users: ramp agents, supervisors and administrators.

Each chapter describes, step by step, the operations to perform according to your role. The chapters about passengers can also serve as information material for the public.

KEY POINT

The application interface is in French. This manual gives the on-screen French labels together with their English meaning.

KEY POINT

Keep this document at hand during training. Procedures must be followed in the indicated order, especially for baggage handling.

2. System overview

Police Bagage covers the full journey of the passenger and their baggage, from check-in at the counter to loading into the aircraft hold, including boarding at the gate. The system detects fraud attempts in real time and provides supervisors with live monitoring and reports.

Platform applications

Application	For whom	Main use
Mobile app	Ramp agents	Scan boarding passes and baggage
Dashboard	Supervisors, admins	Monitor activity, produce reports
Disputes	Supervisors	Handle disputes and claims
Baggage tracking	Passengers	Check a bag's status
Today's flights	Passengers	Check flights and their status

3. Roles and access

Your role determines which applications you can access and which actions you can perform. Each user has a personal account created by an administrator.

Role	Access	What you can do
Administrator	Dashboard	Create and manage accounts; all supervisor actions
Supervisor	Dashboard, Disputes	Monitor flights, change statuses, produce reports, handle disputes
Agent	Mobile app	Scan, load into the hold, reroute

IMPORTANT

Never share your credentials. Any action performed from an account is the responsibility of its holder. If a device is lost or stolen, inform your supervisor immediately.

4. Agent manual (mobile app)

The mobile app runs on Zebra scanning terminals. The built-in reader sends scanned codes directly into the application.

4.1 Logging in

1. Open the Police Bagage app on the terminal.
2. On first launch, the welcome screen appears; tap Commencer (Start).
3. Enter your email address and password.
4. Tap Se connecter (Sign in).

IF AN ERROR OCCURS

If the email is invalid, the field turns red. If the credentials are wrong, a clear message tells you. Check your entry and try again.

4.2 Selecting a flight

1. After signing in, the list of today's flights appears.
2. Select the flight assigned to you.
3. The flight detail opens, with the available functions. Scroll to see all functions.

Screen: flight detail and available functions

1

Check-in — register passengers by scanning their boarding pass.

- 2** Bagages (Baggage) — confirm each bag on the belt (anti-fraud check).
- 3** Embarquement (Boarding) — confirm passengers at the gate.
- 4** Charger (Load) — load all registered bags into the hold (bulk).
- 5** Rush — mark remaining bags for rerouting.

4.3 Check-in: scanning boarding passes

This function registers passengers from their boarding pass.

- 1.** From the flight detail, tap Check-in.
- 2.** Scan the passenger's boarding pass.
- 3.** The passenger appears: name, seat, class, route and number of declared bags.
- 4.** Continue with the next passenger.

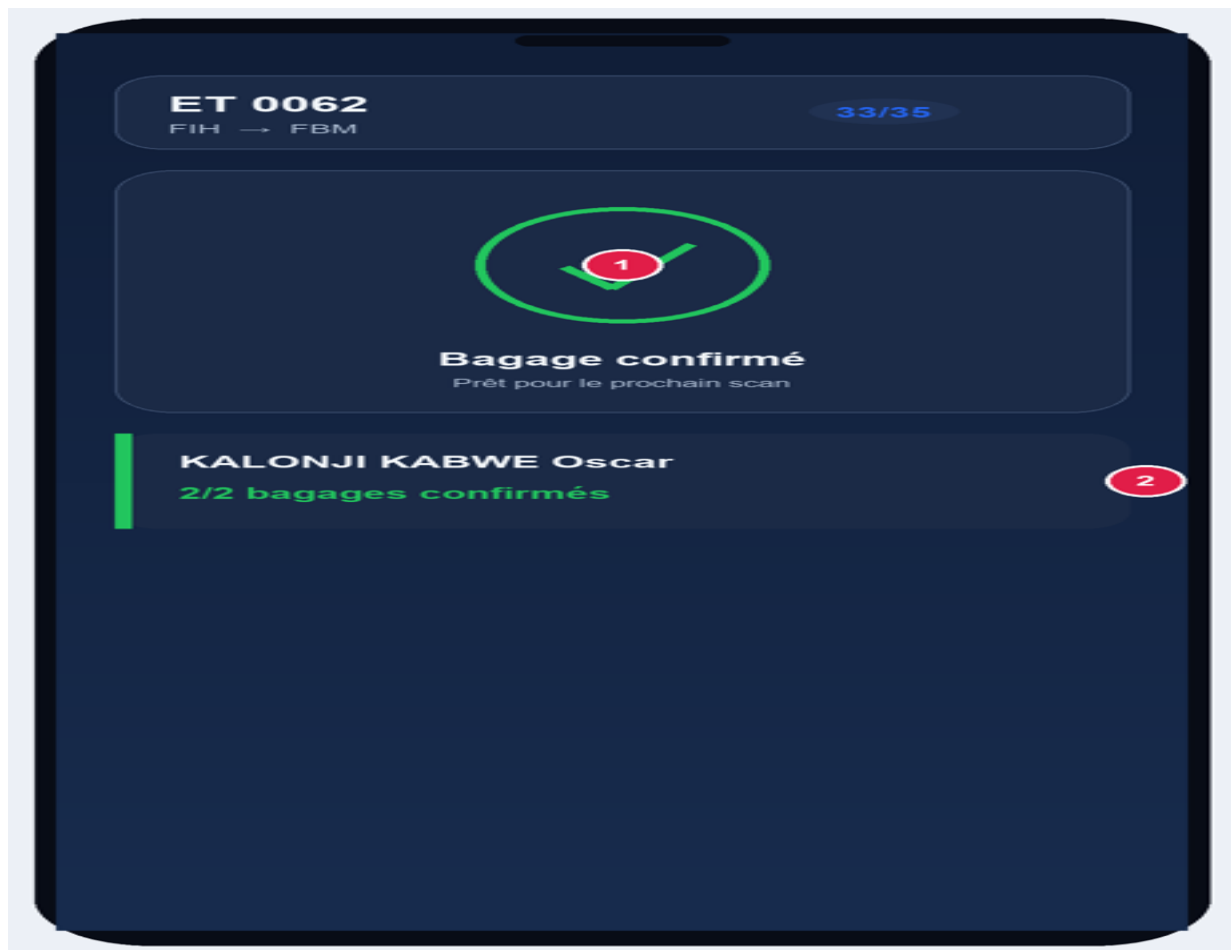

IMPORTANT

The number of bags declared on the boarding pass is authoritative. It determines how many bags will be allowed on the belt for that passenger.

4.4 Baggage: scanning tags

This function confirms each bag on the belt and automatically applies the anti-fraud check.

- 1.** From the flight detail, tap Bagages (Baggage).
- 2.** Scan the bag tag.
- 3.** If the bag is allowed, it is confirmed and the counter increases.
- 4.** If the bag is rejected, a message states the reason. In case of fraud, an alert is sent to the supervisor immediately.

Screen: scanning a bag and the result

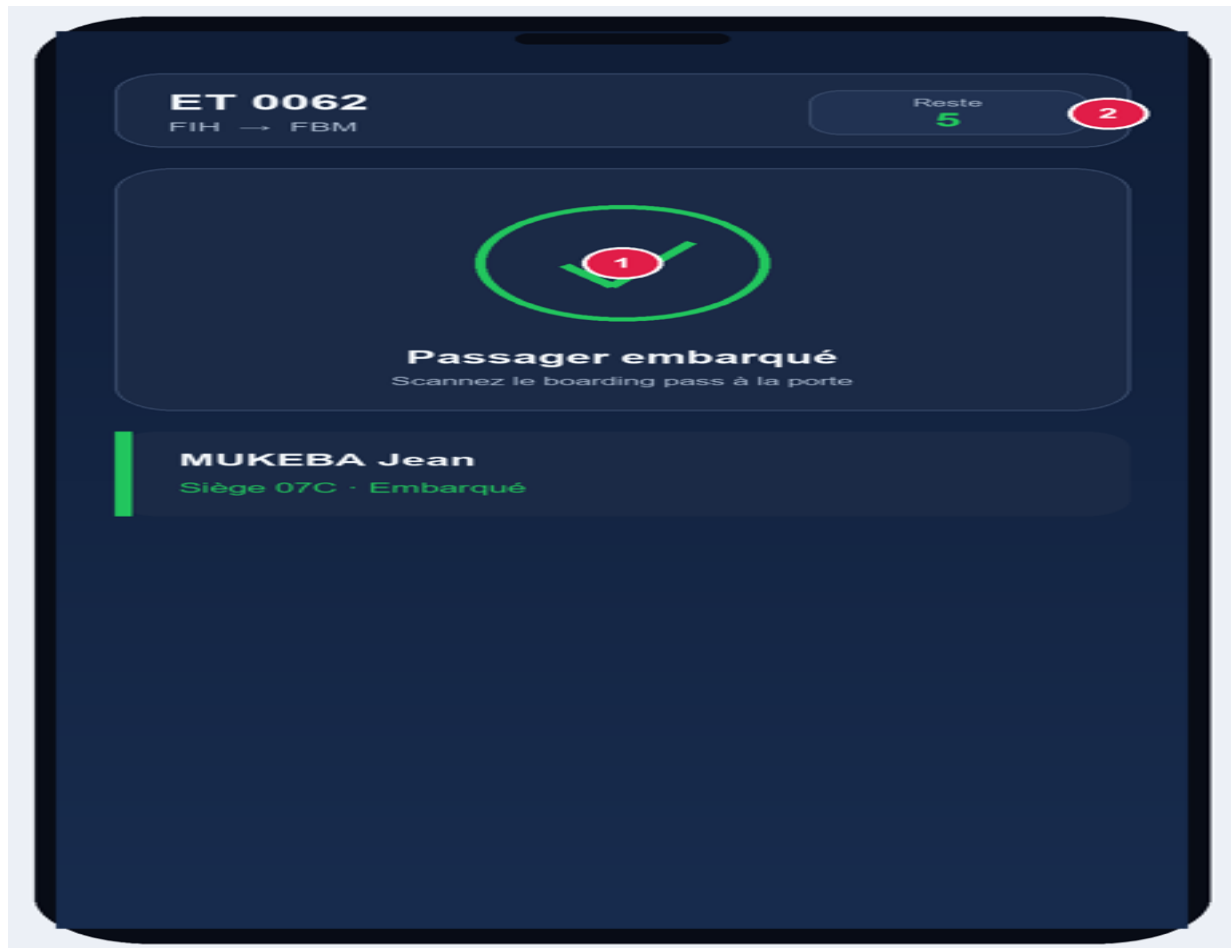

- 1** Scan area: aim at the tag; the result appears immediately.
- 2** Last scan: the passenger and the confirmed-bag counter.

KEY POINT

The baggage agent is never at fault. You scan what comes on the belt. A rejection means the supervisor must step in: never force a rejected bag through.

4.5 Boarding: confirming passengers at the gate

- 1.** From the flight detail, tap Embarquement (Boarding).
- 2.** Scan the passenger's boarding pass at the gate.
- 3.** The passenger is marked as boarded; the remaining-passengers counter updates.

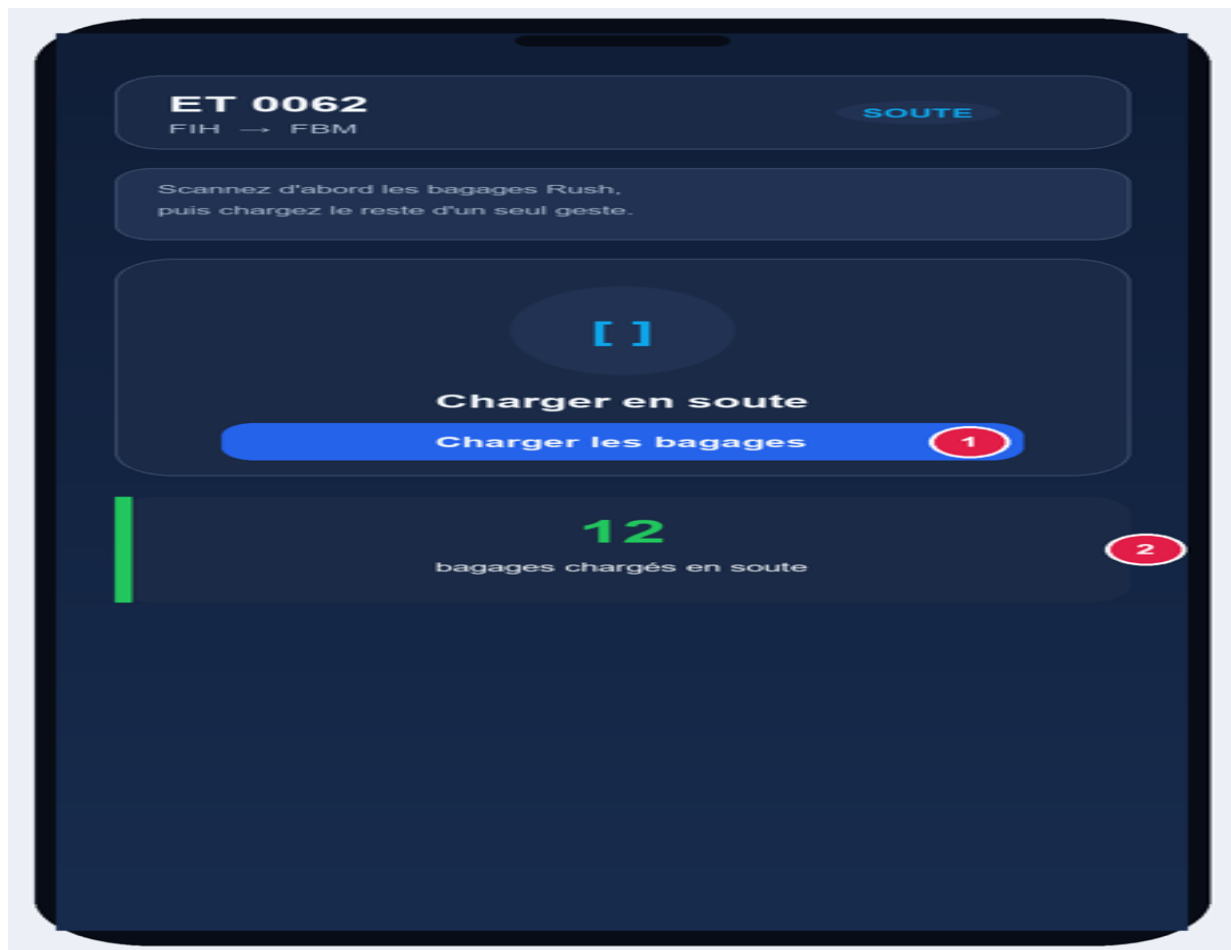

Screen: boarding at the gate

- 1 Scan area: scan the boarding pass at the gate.
- 2 Counter of passengers still to board.

4.6 Load: loading bags into the hold

This function loads, in a single operation, all registered bags that are not marked for rerouting. No scanning is required.

1. First mark remaining bags with the Rush function (see 4.7).
2. From the flight detail, tap Charger (Load).
3. Tap Charger les bagages (Load the bags).
4. The number of bags loaded into the hold is shown, along with excluded (rush) bags and the total of registered bags.

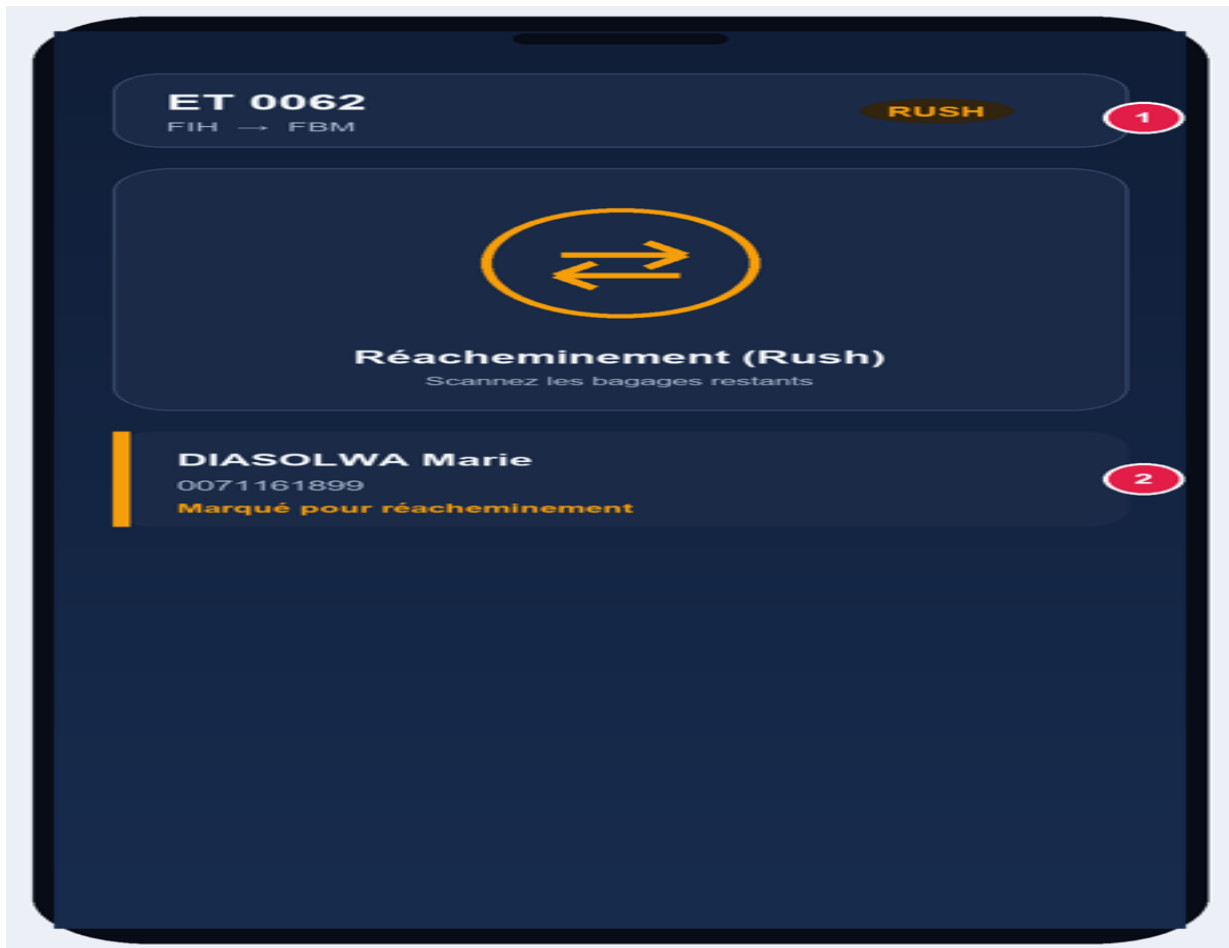

Screen: bulk loading into the hold

- 1 Charger les bagages button: sends everything else into the hold, no scanning.
- 2 Result: number of bags loaded into the hold.

4.7 Rush: marking bags for rerouting

This function marks the remaining bags that could not be loaded and will be rerouted on the next flight.

1. From the flight detail, tap Rush.
2. Scan each remaining bag to be rerouted.
3. Each marked bag is confirmed on screen.

Screen: marking bags for rerouting

- 1 Rush mode active: scan the remaining bags to reroute.
- 2 Confirmation: bag marked for the next flight.

IMPORTANT

Recommended order: first scan the Rush bags, then use Charger (Load) to send everything else into the hold. This way, rerouted bags are never loaded by mistake.

5. Supervisor manual (dashboard)

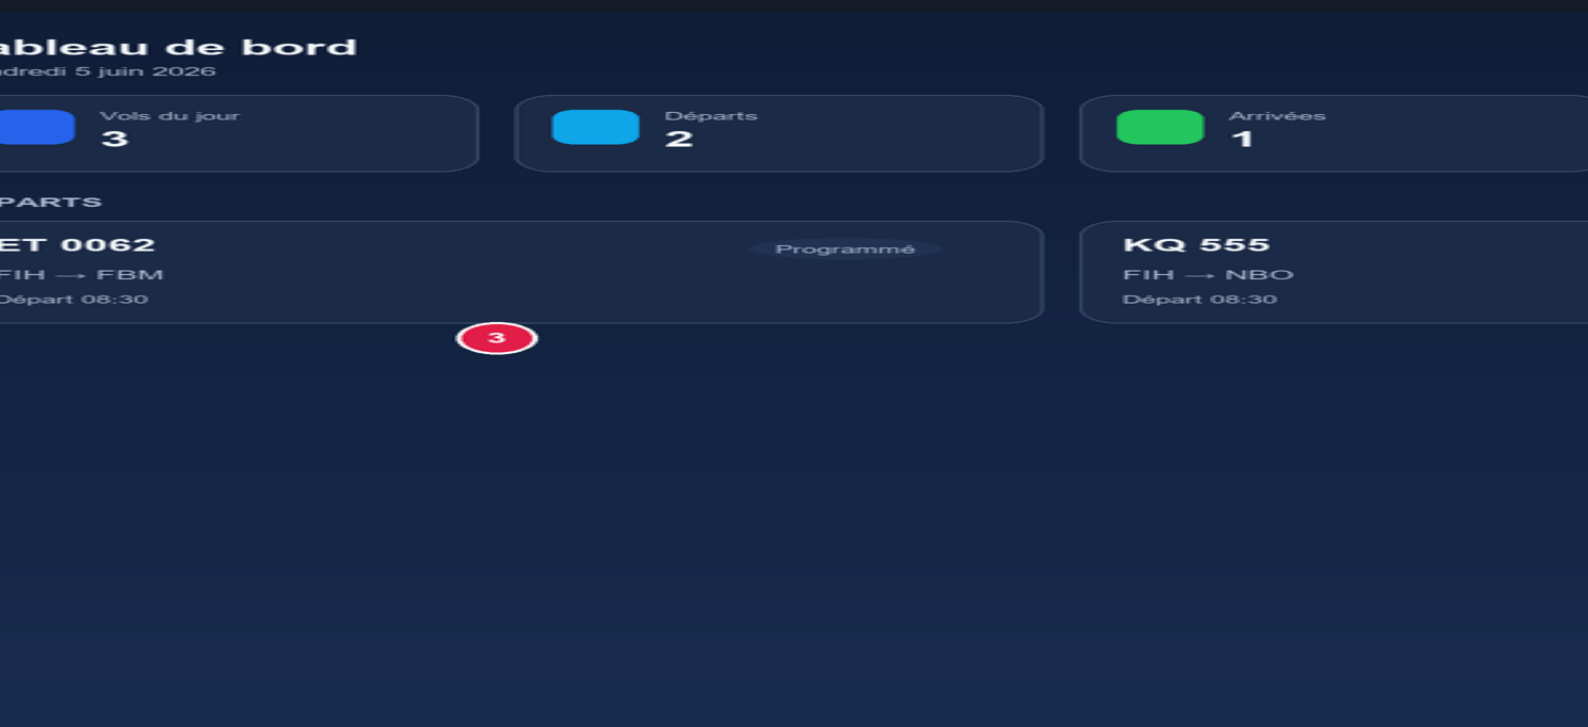

The web dashboard provides a real-time overview and lets you produce activity reports.

5.1 Signing in

1. Open the dashboard address in a browser.
2. On the home page, click Se connecter (Sign in).
3. Enter your credentials. Once signed in, you go straight to the dashboard on your next visits.

5.2 Reading the dashboard

The overview shows today's flights, split into departures and arrivals, along with the key counters: number of flights, departures, arrivals and fraud alerts. Current alerts are highlighted.

Screen: dashboard (overview)

1. Navigation menu: Dashboard, Reports, and Accounts (admins).
2. Key counters, including today's fraud alerts.
3. Flight cards: click to open a flight's detail.

5.3 Viewing a flight's detail

1. Click a flight to open its detail.
2. Review the counters: passengers, boarded, confirmed bags, loaded in the hold, rerouting, and fraud alerts.
3. The passenger list shows, for each one, the confirmed bags and the boarding status.

5.4 Changing a flight's status

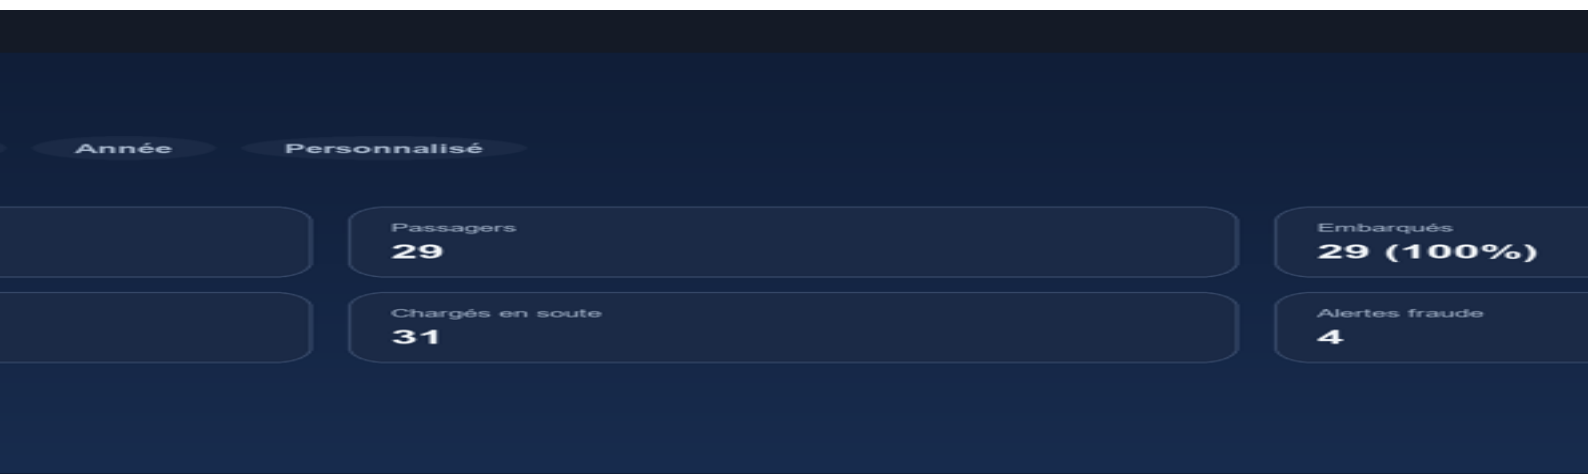

1. Open the flight detail.
2. Select the desired status: Programmé (Scheduled), Embarquement (Boarding), Fermé (Closed) or Annulé (Cancelled).
3. The status updates immediately, including for passengers on the public flights app.

5.5 Understanding fraud alerts

Fraud alerts are flagged and displayed automatically. They serve as a record and a signal to act: send an agent to physically intercept the bag on the belt or at the indicated gate.

5.6 Producing a report

1. In the menu, open Rapports (Reports).
2. Choose the period: Day, Week, Month, Year or Custom.
3. For a custom period, set the start and end dates.
4. Review the displayed statistics, then click Télécharger Excel (Download Excel).

Screen: Reports page and period filter

- 1 Period tabs: Day, Week, Month, Year, Custom.
- 2 Download Excel button: produces the report for the selected period.

KEY POINT

The Excel file contains several sheets: a figures summary, the detail of flights, passengers, bags, and the list of fraud alerts for the period.

6. Supervisor manual (disputes)

The disputes application lets you monitor baggage, open cases and handle claims submitted by passengers.

6.1 Filtering baggage

1. Open the disputes application and sign in.
2. By default, the current day is shown. Choose another date if needed.
3. Refine with the filters: flight, loading state and dispute status.
4. Use search to find a tag, a serial number, a PNR or a passenger name.

The screenshot shows the 'Litiges bagage' application interface. At the top, it says 'Litiges bagage' and 'Aujourd'hui - 35 bagages - 2 litiges en cours'. Below this are filter buttons: 'Recherche...', 'Tous les vols', '1' (highlighted with a red circle), 'Aujourd'hui', and 'Litige : tous'. The main table has columns: 'Numéro de bagage', 'Passager', 'Vol', 'Chargement', 'Litige', and 'Passager'. The table contains three rows of data:

Numéro de bagage	Passager	Vol	Chargement	Litige	Passager
1303821	MUKENDI Moise	ET0062	Chargé	Ouvert	Passager
1303759	DIASOLWA Marie	ET0062	En attente	En cours	
1303760	KALONJI Oscar	KQ0555	Chargé	—	

Screen: disputes application (list and filters)

1. Filters: search, flight, date and dispute status.
2. Dispute status and a 'Passager' mark if the claim comes from a passenger.
3. Rapport du jour (Daily report): downloads the day's disputes as Excel.

6.2 Opening and tracking a dispute

1. Click a bag to open its detail panel.
2. Set the status (Ouvert/Open, En cours/In progress, Résolu/Resolved), the reason and notes.
3. Save. The status is reflected in the tracking seen by the passenger.

6.3 Handling a passenger claim

When a passenger reports a problem from the tracking app, a claim is created automatically and appears in the list, marked as coming from a passenger. Open it, handle it as a dispute and update the status.

6.4 Downloading the daily report

1. Click Rapport du jour (Daily report).
2. The Excel file of the day's disputes is downloaded.

7. Administrator manual (accounts)

Only administrators can create and view agent and supervisor accounts.

7.1 Creating an account

1. In the dashboard menu, open Comptes (Accounts).
2. Enter the person's email, password and full name.
3. Choose the role: Agent, Supervisor or Administrator.
4. For an agent, set the assigned gate if needed.
5. Confirm creation. The account is active immediately.

KEY POINT

Share the credentials securely and ask the person to keep them confidential.

IMPORTANT

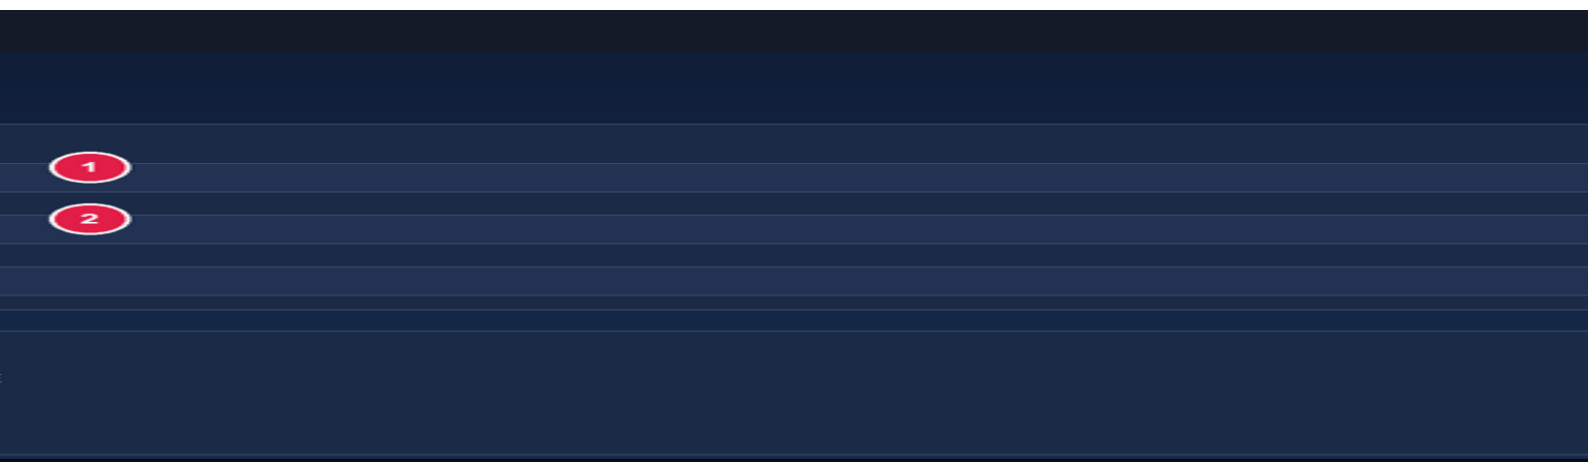

Grant the Administrator role sparingly: it gives access to managing all accounts.

8. Passenger guide (tracking and flights)

These public applications require no account. This chapter can serve as information material for passengers.

8.1 Tracking a bag

1. Open the baggage tracking application.
2. To see all your bags, enter your booking reference (PNR).
3. To see a single bag, enter its tag number (ten digits).
4. Check the status of each bag.

Screen: baggage tracking (search and result)

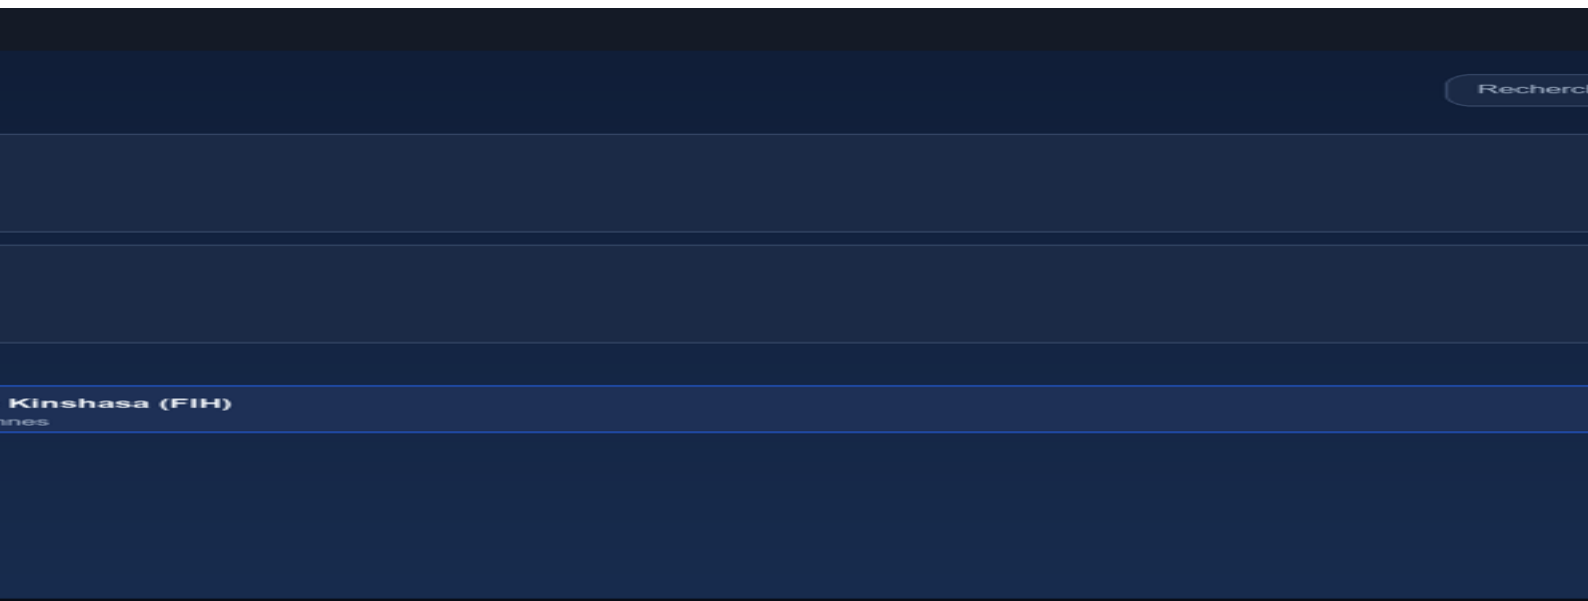

- 1 Search by PNR: shows all of the passenger's bags.
- 2 Search by tag number: shows only that bag.
- 3 Result: passenger, flight and status of each bag.

8.2 Reporting a problem

1. On the relevant bag, tap Signaler un problème (Report a problem).
2. Choose the type of problem, describe it and leave a contact if you wish.
3. Send. The claim is forwarded directly to the supervisor.

8.3 Viewing today's flights

The today's-flights application shows only the current day's flights, with their status (Scheduled, Boarding, Closed, Cancelled) and a delay indication where relevant. Links give access to the official airport portal services.

Screen: today's flights (statuses and services)

- 1 Search a flight by its number.
- 2 Flight status and a 'Retardé' (Delayed) indication where relevant.
- 3 Links to the official airport portal (fih-rva.com).

9. Understanding baggage statuses

The bag goes through successive states, from least to most advanced. These statuses are visible to the passenger in the tracking application.

Status	Meaning
En attente (Pending)	Bag declared but tag not yet scanned on the belt.
Enregistré (Registered)	Tag scanned on the belt; anti-fraud check passed.
Chargé en soute (Loaded)	Bag loaded into the destination hold (Charger function).
Réacheminement (Rerouting)	Remaining bag to send on the next flight (Rush function).

10. Anti-fraud rules

The check applies when a bag tag is scanned. The following rules are automatic and can never be bypassed.

Detected situation	Decision	Alert
Passenger not registered for this flight	Bag rejected	Yes
Zero bags declared on the boarding pass	Bag rejected	Yes
Declared bag count exceeded	Bag rejected	Yes
Tag already scanned on this flight	Bag rejected	No (duplicate)
Bag belongs to another flight	Bag rejected	No

KEY POINT

Fraud originates at the check-in counter, where a tag may have been printed on a booking with no declared bag. The system intercepts the item before it goes into the hold and alerts the supervisor.

11. Frequently asked questions

Scanning does not work on the terminal.

Make sure you are on the correct scan screen (Check-in, Bagages, Embarquement or Rush) and that the reader is active. Try the scan again.

A bag is rejected although it seems normal.

The rejection follows the anti-fraud rules. Do not force it. Report it to the supervisor, who will decide on the action to take.

I cannot see all the functions on the flight detail.

Scroll down: all functions, including Charger and Rush, are accessible by scrolling.

The web page shows an error or does not load fully.

Reload the page. If the problem persists after an update, clear the browser cache and reload.

A passenger cannot find their bag in tracking.

Check that they enter the correct PNR or the correct ten-digit tag number. The bag only appears once registered on the belt.

12. Good practices

- Sign in with your personal account only and sign out at the end of your shift.
- Never share your credentials.
- Follow the baggage order: scan on the belt, then Rush, then Charger.
- Never force a rejected bag: refer to the supervisor.
- Watch fraud alerts and act without delay.
- If a terminal is lost or stolen, inform your supervisor immediately to revoke access.

ATS Handling — Kinshasa International Airport (FIH). Internal training document.
